

Environmental Services

Across the world, land is developed to support the ever-increasing human population. Woolpert is committed to balancing business growth, housing demands and defense needs while providing sound environmental services for the ecological, social and economic aspects of development. Through a single point of contact, Woolpert's multidisciplinary capabilities address all of a project's environmental aspects to increase efficiency and demonstrate our commitment to clients and the environment.

NEPA Documentation

Passed in 1969, the National Environmental Policy Act (NEPA) requires federally funded initiatives to document all factors that may significantly impact the environment. Woolpert has completed NEPA documentation for an array of clients since the law's implementation; we have built a strong reputation within the industry for our quality NEPA work.

WOOLPERT

ARCHITECTURE | ENGINEERING | GEOSPATIAL

Sustainable/Conservation Design

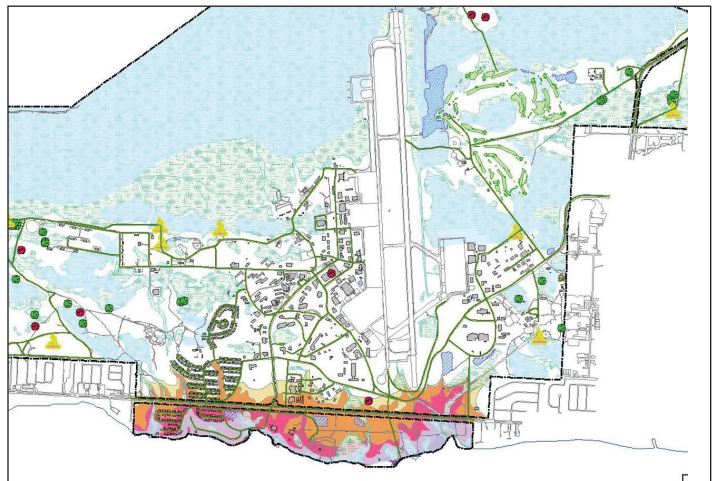

Woolpert's diverse staff of architects, engineers, land use planners, landscape architects and water resource managers is well versed in ecologically sensitive solutions. Our sustainable design specialists provide internal training, consulting and leadership support to help us help our clients conserve sensitive areas.

Wetlands and Streams

We are proud to meet our clients' ongoing needs for conservation, permitting, and wetland and stream impact mitigation. We provide accurate resource delineations and excel at helping our clients navigate the complex and ever-changing permitting process. Our interdisciplinary approach helps us achieve our clients' goals using the lowest-cost and least-intensive permit requirement possible.

Ecological Inventory and Restoration

When projects have the potential to affect plants and wildlife, Woolpert is there to help clients navigate regulatory requirements. We conduct tree inventories and surveys of rare, threatened or endangered species. When habitats require restoration, Woolpert's environmental team is skilled in the art and science of ecological restoration design, construction observation and monitoring across a wide range of geo-biological regions.

Environmental Assessment

North Augusta, South Carolina

Replacement Parcel at Northview Park to Compensate for Conversion of Riverview Park Soccer Field

Draft

May 2010

Air Quality and Environmental Contamination

To minimize human health and natural environment contamination risks, Woolpert helps clients inventory, analyze, and assess hazardous materials and air emissions. We recommend measures to avoid or remedy environmental contamination for infrastructure and building projects and assure that all new projects meet Clean Air Act requirements.

Cultural Resources Management

The National Historic Preservation Act of 1966 is legislation intended to preserve historical and archaeological sites. The act created the National Register of Historic Places, the List of National Historic Landmarks and the State Historic Preservation Offices. Woolpert helps clients determine if their projects will affect historic properties, and we guide them through the inventory and assessment process. Furthermore, we support cultural resource management by developing measures to preserve and restore historic properties.
