AirportWorX

Powered by the latest Esri technology and developed by Woolpert, AirportWorX™ addresses the operational, maintenance, and regulatory compliance needs of general aviation, small commercial, Part 139, and non-Part 139 airports. With five easy-to-use modules, AirportWorX features dashboards for quick analysis, automated forms for data collection, and custom reports for inspections, wildlife, and fueling. It also simplifies work order and lease management using map-based interfaces.

AirportWorX gives smaller airports the same GIS power that large commercial airports use to streamline day-to-day operations. Available on desktop and mobile, AirportWorX empowers field staff to work from anywhere, optimize operations, understand data, communicate effectively, and manage tasks efficiently.

AirportWorX offers subscription-based applications with 40 hours of support, covering training through configuration. No additional software or IT support is needed, making it an ideal management tool for airports with limited budgets.

FEATURES

- Color-coded visual analytics
- Desktop and mobile versions
- Document and image uploads
- Downloadable reports
- Full customization
- Issue tracking
- Restricted security access
- Robust asset detail cards

BENEFITS

- Allows collaboration using real-time data
- Improves data analytics
- Promotes regulatory compliance
- Reduces expenses
- Simplifies management

MODULES

**AIRPORT INSPECTION**

WILDLIFE OBSERVATION

FUEL INSPECTION

WORK ORDER MANAGEMENT

LEASE MANAGEMENT
